Triple Threat Protection from Cut, Abrasion and Puncture Resistance - ALL IN ONE GLOVE.

KEVLAR® LEATHER PALM w/Steel Mesh Fingers and Thumb

FUNCTIONAL BENEFITS:

Taber abrasion tests reached 10,000 cycles without achieving failure

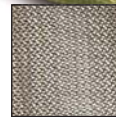

So far off the CE and ASTM Abrasion scale, we threw in the towel, for fear we would be running the test for days.

On the palm area, 7.16 kilos of force were applied before they would puncture, and on the thumb and first two fingertips, it took 12.85 kilos of force (string knit glove scores are negligible, while a standard leather palm scores approximately 2 kilos)

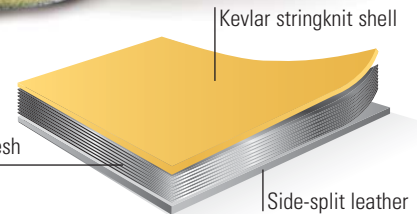

The thumb and first two finger-tips and thumb crotch are an incredible - and unheard of - over 21,000 grams of cutting force. Compare that to 700 grams for an SK Kevlar® glove. To achieve a Cut Level of 5, a glove must score 3500 grams. For the palm, we achieved a very high Cut Level 4, with a 3400 gram test result.

APPLICATIONS:

Sheet metal
Metal stampings
Glass handling
Recycling depots
Garbage collection
Forestry

8 layers of steel mesh

Kevlar stringknit shell

Side-split leather

Action, Kevlar® Leather Palm w/ Steel Mesh Fingers and Thumb

Introducing the SKLPSMT: unbelievably strong performance, in the three most vital aspects of hand protection: **Abrasion, Cut and Puncture**. This glove has a heavyweight Kevlar® seamless glove body with great cut-resistant properties, married to an abrasion-resistant premium sidesplit palm. But it's what's in between that really sends this glove off the charts....there are EIGHT layers of finely woven stainless-steel mesh between the leather and the Kevlar® knit in the most critical areas: the thumb, first two fingers and the crotch, with a single layer of mesh between the entire leather palm and shell. The abrasion resistance is top-notch as always because of the leather palms and the way they wrap around the sides of fingers, to increase protection and comfort and extend the life of the glove.

Puncture-resistant gloves are invariably stiff and uncomfortable to wear, but the stainless steel woven inserts in the SKLPSMT are flexible and barely noticeable. This results in an incredible combination of puncture resistance and comfort. And best of all, the cut resistance is unbelievable in the critical areas. In fact, we were so far off the scale of protection, we even amazed ourselves. **And so, we called it the 'TRIPLE PLAY'.**

Kevlar® is a registered trademark of E.I. du Pont de Nemours and Company.

ACTION

SKLPSMT Kevlar®, wraparound leather palm w/steel mesh, Sizes S, M, L, XL, XXL

The Workplace HR & Safety Commitment to Worker Safety Award recognizes achievements in safety equipment product development.
