

Item No.
76GRFRQ

Endura[®], FLAME RETARDANT Cowgrain Fitters Glove

FUNCTIONAL BENEFITS:

- Economical FR hand protection
- Flame-retardant cotton gauntlet cuff and back of hand
- Supple cowgrain gunn-cut palms
- Internal elasticized back
- Kevlar[®] sewn throughout

APPLICATIONS:

- Refineries
- Welder's helper
- Spot welding
- Utilities
- Natural gas distribution

76GRFRQ

Endura[®] FRskinz Cowgrain Fitters Glove

These cowgrain gloves have a polyurethane-reinforced gauntlet cuff, as well as all the same great features of our grain fitters gloves, like leather-tipped fingers, knuckle straps, gunn-cut pattern and palm lining. The difference, and what makes them a first in the market, is the fact that the cotton areas of the glove are flame-retardant, and the whole glove is sewn with Kevlar[®] thread. These gloves are designed for applications involving open flame or spark, where all other aspects of protective attire are made to be flame-retardant. Up until now, there was no fitters glove on the market made with this quality, so we are pleased to introduce one that is. This was inspired by workers in Alberta's oil sands, but is ultimately geared toward anyone working around flame, arc flashback and spark. Palm is lined for added heat protection.

76GRFRQ Endura[®] cowgrain fitters glove, patch palm, flame retardant back of hand, cuff, with polyurethane-reinforced gauntlet cuff

DuPont[™]
Kevlar is a registered trademark of E.I. du Pont de Nemours and Company.

Flame-resistance and Natural Fibres

Natural fibers typically do not melt. However, cotton ignites quickly when exposed to spark or open flame and will continue to burn, and while many other fabrics will resist flame, they are not suitable for use in high-heat conditions. Or, they are prohibitively expensive for a fitter glove style. We used cotton in our new FRskinz because of its natural comfort and breathability, which we've specially treated to eliminate the possibility of ignition occurring.

Engineered hand protection for every industry[®]
