

Item No.  
**RDVBPfMD**

# METAL-DETECTABLE

## Blue Vinyl Disposable Gloves

### FUNCTIONAL BENEFITS:

Gloves are fully detectable if pieces break off during food handling

Industrial-grade and CFIA-approved for food handling

6 mil. thickness for extra resistance to tearing  
Vinyl offers great economy and versatility with no allergic reactions to worry about

Rolled cuff for ease of donning

Powder-free

### APPLICATIONS:

Food Handling  
Pharmaceutical  
Laboratories

RDVBPfMD

### Metal-detectable Blue Vinyl Disposable Gloves

Premium-quality, 6-mil, powder-free, metal-detectable blue vinyl gloves are designed specifically to eliminate the worry of two types of contamination during food handling. Gloves provide an excellent barrier against both worker and foreign object contamination since gloves are fully detectable (both visually and magnetically) should a piece break away and fall into food. Detectable in the electromagnetic range of 50Khz-1Mhz, even the smallest torn piece will not pass through metal detectable equipment in order to prevent contamination of final product. At a thickness of 6 mil, they resist tearing, yet provide plenty of touch sensitivity. Gloves are both CFIA and FDA/EEC approved for food handling.
