

Item No.

378SXB/378SXBFL

Clutch Gear®, 'FRISK' DUTY Gloves

FUNCTIONAL BENEFITS:

Made from strong, supple goat-grain leather

Leather is water-repellent treated

Cuffs are elasticized for a snug fit

Liner is made with a blend of nylon, fiberglass and Dyneema®

Gloves received an EN score of 3541, according to the 388:2003 test method.

Fine-gauge, seamless knit provides a high degree of dexterity and flexibility

Ergonomically shaped to the natural curves of the hand

APPLICATIONS:

Law Enforcement

Blade handling

Gloves that don't feel like gloves.

Incorporating glass fibre into composite yarns yields an excellent range of properties.

Fibreglass has a high strength-to-weight ratio, and when used in textiles, remains unaffected by the multi-directional movement of knit structures. Glass is versatile, economical, and lightweight, and when combined with sophisticated fibres like ultra high molecular weight polyethylene such as Dyneema®, gains unparalleled cut-resistant properties. Gloves made with fibreglass gain strength without additional bulk or weight.

Clutch Gear® 'Frisk' Duty Gloves

Premium-grade 'Frisk' duty gloves are made from goat-grain leather, and feature a liner made with a composite blend of fiberglass and Dyneema® to protect against injury from razors, knives and other sharp objects.

Outer glove is a black grain-leather roper style that is water-repellent treated and provides excellent abrasion resistance and dexterity. Goat skin is known for its strength, and the grade used in our duty gloves passes the demanding BS3144 tear-strength test, and the CAN/CGSB 4.2method 26.5 M89 high-pressure water-penetration test.

Liner is a seamless 13-gauge fiberglass/nylon string-knit glove made with Dyneema® for extreme cut resistance. Dyneema® is the material used in many types of police ballistic vests, military helmets and body armor. Fiberglass has a high strength-to-weight ratio that, when combined with Dyneema® fiber, adds strength without any bulk. Gloves received an EN score of 3541, according to the 388:2003 test method.

Gloves are exceptionally comfortable and dexterous, and feature elasticized cuffs for a snug fit.
