**What Does NASA Do:**

**NASA's vision:** We reach for new heights and reveal the unknown for the benefit of humankind.

To do that, thousands of people have been working around the world -- and off of it -- for more than 50 years, trying to answer some basic questions. What's out there in space? How do we get there? What will we find? What can we learn there, or learn just by trying to get there, that will make life better here on Earth?

**On Our Gloves (#S18TGFN)**

"The gloves seemed to help the operator maintain dexterity while providing protection from contaminants. Residual chemicals on the exterior of waste drums were prevalent, and the sample provided more than adequate protection for the conditions that existed. The fabric is breathable and very comfortable in comparison to the bulkier leather gloves worn for protection from sharp objects. Working with bung wrenches and other tools on site while wearing these gloves made the tasks easier to accomplish since there was no loss of dexterity in the digits. Since the gloves were more comfortable, the users were less likely to remove the PPE at any given time while performing the task at hand."

*"It is nice to be able to test out the product prior to making bulk purchases."*

**Michelle M.**, Environmental Engineer of Integrated Mission Support Service for NASA

**About The Benefits of Working With Our Company**

"Thank you again for the samples. It is nice to be able to test out the product prior to making bulk purchases."
