

YOUR FAVORITE GLOVE JUST GOT BETTER!

PART NUMBER
S10SXB

EFFECTIVE DATE
IMMEDIATELY

KEY FEATURES

- Cut resistance level A8
- Treated with Ultra-Fresh to achieve 99.9% antimicrobial status
- Fully launderable to retain glove's shape, size and antimicrobial status
- FDA and CFIA compliant

ABOUT S10SXB

The S10SXB is specifically designed to minimize the risk of contamination in the workplace while offering the perfect balance between reliable protection, great comfort, and the ability to handle a wide variety of food processing tasks. There is an opportunity to better serve the needs of the food processing industry by improving the S10SXB. Currently, few protective glove options other than chainmail exist for performing tasks requiring very high cut protection; however, chainmail gloves do not tend to offer the dexterity this glove can when performing complex tasks.

WHAT HAS CHANGED?

The **ANSI cut level A6 to an A8.** This will provide users protection against dangerous cut hazards in food processing while still allowing for the ability to complete dexterous tasks.

This change is part of a rolling change - you may receive ANSI Cut A6 gloves until stock is depleted.
